The S.S.P
Sector 9,
Chandigarh

Sub : Complaint of Physical Digital Surveillance and Remote Neural Monitoring

Respected Sir/Madam

Sir It is to inform you that I Sumeet Singh, Resident H. No. 3387, Ground Floor, Sector 47 D, Chandigarh, living with my mother and grandmother, my brother is settled in abroad so it is me /applicant who is the only male member to look after my old age mother and grandmother as my father had been passed away long time ago. Sir I had been tortured due to the acts of my neighbours and if these acts were committed against some renown or against women then every one could have believed it. Past from 2 years I had been tortured mentally by these people namely Parshotam Lal resident of # 3387/1, Ashwini Sharma resident of #3386 and Rakesh Sharma resident of #3388 they all live in same locality of my Sector 47D Chandigarh.

Now these above mentioned people had gone to an extent which when I think of literally upset my mind in other words it devastated my life. Firstly when we were in Amritsar in 2019 Dec 28/29/30 for my cousin marriage and handed keys to 3386 of 47-D Chandigarh, this person Parshotam Lal # 3387/1 did approach to #3386, I am also sure these people in # 3387/1, # 3386, # 3388 with their common understand collaborated and they implanted bugs like spy camera and audio devices for monitoring me and my family from there adjoin wall, niches so that they can pull out these spy bugs any time they want, I am sure the noise and the communication of these people were coming from niches or some holes they done in my house while implanting bugs in 2019, secondly they been spying on me and on my family and been hacking my network by hiring a private investigator and hacker from since 2021 Jan, this private investigator and hacker are new people into this business and been refining there techniques of hacking and spying, that's why they stayed in 3387/1 for long period of time, and in 2022 June in 3387/1 this private investigator got this device called Remote Neural Monitoring which is commonly use for Brain Hacking and which is done by devices related to (EEG) Electroencephalography head sets, (BCI)-Brain Computer Interface hardware devices and with some other applications, software running on computer with algorithms which can decodes sub vocalization, thoughts, and auditory data brain waves into text and can connect to anyone without physical connection and can access to any one brain activity, and it is well documented and scientific proven that Neurotechnologies are capable to extract information from brain waves and there are some cases coming up in India regarding Brain hacking and some world media has widely reported and reckoned such types of incidents in the past decade.

Remote neural monitoring technology is another tool for organised crimes run by cyber criminals, this kind of cyber crime will definitely violate my personal freedom and it is imminent threat to my public as well as private life. Moreover these Remote Neural Monitoring is crime against society and it should be dealt in a very strict manner so that no other person can think of doing it with someone else. Sir/Madam and if no action is taken against these people there would be irreparable and collateral damage to me, my family and in society moreover as it is related with leaking personal information of a private person and is a threat to Indian national security. So therefore I request you to Kindly look into the matter and investigate it properly.

Date: 6/10/2025

To

The Director,
Central Bureau of Investigation,
Lodhi Road,
CGO Complex,
Delhi
110003

Respected Sir,

I would like to inform you that from the past 5 years since December 2020, I have been the victim of Remote Neural Monitoring which is commonly used for Brain Hacking and which is done by devices related to (EEG) Electroencephalography, VR head sets (BCI)-Brain Computer Interface hardware devices, satellite based harassment or with some other applications, software running on computer with algorithms which can decode subvocalizations, thoughts, memories, visual and auditory data brain waves into text.

These technologies are used to harass me 24x7 and intrude on my privacy, even within my home and everywhere I go. A few people who reside in my locality, my neighbours namely Parshotam Lal, his grandson, two of his relatives' sons, and two of his acquaintances one female and a male, who reside in 3387/1, Ashwini Sharma, resident of 3388, and Rakesh Sharma, resident of 3388 of Sector 47-D Chandigarh along with some unknown persons are running these programs on me. They are using advanced applications, softwares, devices, satellites for illegally spying on my personal freedom. These technologies are used to hack my brain and for bio hacking and damaging my DNA remotely through the use of EM waves. They can connect to me without physical connection remotely and can access my brain activity.

There are almost 8-9 people wearing EEG /VR headsets that access my brain at the same time with the help of satellite DNA technology. They are communicating with Microwaves and doing mind interrogation on me. This is a harassing experience and is destroying my cognition and well being.

As proof, I am attaching several scientific studies, media publications, open source material, military studies, reference books, interviews with experts, and classified documents. These documents prove that such advanced neurotechnologies exist that are being used on me 24x7 to destroy my brain and life.

There are many other such victims in India as well as abroad who are going through the same suffering. I would appeal to you to please go through the attached

documents and take preventive measures.

As long as the public are unaware of the above secret surveillance on mass scale by these secretive operators, more innocent civilians could be targeted in future as well. This leaves us with a very fundamental questions of a dignified human life. What is worse in this world than your body, brain and mind getting hacked and harassed covertly and illegally.

Your Faithfully
Sumeet Singh

→ Pune: 'My Brain Hacked Through Satellite', IT Professional In Complaint To Pimpri Chinchwad Police

Pimpri, 21st February 2022: An IT professional has filed a complaint with Pimpri-Chinchwad police stating this brain has been hacked through a satellite. He also claimed that he is being controlled through satellite waves and this experiment is being carried out on around 300 to 400 people in the country. The man also wrote an email about it to India's external affairs ministry.

Mind being controlled by Chinese technology, says man who tried to enter NSA's residence

By Vicky Nanjappa

Published: Thursday, February 17, 2022, 10:17 [IST]

New Delhi, Feb 17: On Wednesday a man was caught while trying to enter the residence of National Security Advisor, Ajit Doval. In his explanation, the 43 year old Shaktidhar Reddy from Bengaluru said that he believed that his mind and body are being controlled by some technology that is used by China and the US.

NRI techie claims to be a victim of mind control in US

FNS ■ 03/09/2025

A non-resident Indian from Vijayawada, Taran Basu, who was working as a software engineer in the United States, has stated that he was a victim of Havana Syndrome (HS) which is a possible threat to the human race that controls human minds and endows personal freedom.

Taran spoke to the media here on Wednesday and said Havana syndrome was a cluster of idiopathic symptoms experienced mostly abroad by US government officials and military personnel. The symptoms range in severity from pain and buzz in the ears to cognitive dysfunction and were first reported in 2016 by US and Canadian Embassy staff in Havana, Cuba.

He stated that a Public Interest Litigation (PIL) was filed by a victim three months ago in Karnataka High Court and the judge concerned after listening to the petitioner asked instructions to the Central government to probe and provide the details of Havana syndrome in India. He further said that he would also file a PIL in the AP High Court in line with the petition filed in Karnataka HC after discussing it with the advocates.

He accused the developing technology that can read brains to flourish and influence human brains using people as guinea pigs. He alleged that in 1995, America launched a project under the name of MK

Ultra, and the result of the research was the neuro weapons and energy weapons. These weapons affect the human brain so that they can control some thoughts but also cause a sense of suffering in human beings and this is called Havana syndrome. Many of the victims of Havana syndrome are famous people. There are scientists, doctors, and software engineers, among them is Kamala Harris, a prominent American politician, he said.

Taran, a victim of such Havana syndrome, returned to India following unbearable harassment by the US government, which used to operate our minds with the latest nanotechnology. Taran requested the governments to intervene in the issue and take steps to stop research on human intelligence by the US. Taran furthermore said that the Indian government can take his help in research as a victim he has done five years of research on the same cause.

Voices in the head, courtesy 'CIA'

Aditya Kaul in New Delhi

Nov. 2 — The Vasant Kurji Police is at its wit's end, not knowing what to make of a complaint lodged with it. In what would be one of the most bizarre cases, the complainant has alleged that his thought process is being "monitored" through a "CIA-patented machine".

The complainant, Rajesh Mangal (32), is an electronics engineer from Rajasthan University, who went to United States in December 2001 as an optical fibres specialist with a well known firm. He says that one night in February 2002, he felt electronic waves penetrating his head. "I could hear voices in my head. I looked around but there was nobody," Mr Mangal said.

Rajesh Mangal

Over a period of time, things became more disturbing. He claims, the messages, laced with abuses, asked him to quit the firm. On 7 March, when the complainant was alone in office, "a message flashed in his mind", "Change your department. How much will you take to

leave. It's a racial issue," his tormentor allegedly told him. "I replied in the same mode and told them that I wanted to continue working in the company. I said it wasn't my fault if I was an Indian," Rajesh said. He claims he was finally "forced" to leave the company.

He says the messages, which often appear like a group discussion, have never ceased, even when he was in Hongkong or now when he is in India. His suspicion, which he asserts has been strengthened after he "discovered some facts", is that he is being made the victim of what he calls a CIA-patented "thought detection machine". He has alleged that his former boss is "masterminding" the whole thing.

In Spain there are just over a hundred people who feel they are victims of torture and harassment by electromagnetic radiation and mind control technologies. According to them, all the inhabitants of this country are under electromagnetic coverage, which allows "invading the brain of any person." "They violate privacy, spy, send thoughts and emotions, cause pain and injuries or project words into the eardrum with threats," they list from this association, founded in 2017 by a group of people who found answers to

Tennenbaum, Jonathan.(1988).

Soviet Work on Electromagnetic Pulse Weapons. ←

Executive Intelligence Review. Pg. 17

The 1987 edition of the U.S. Department of Defense review, Soviet Military Power, contains the following stern warning about the current Soviet mobilization to perfect electromagnetic pulse (EP) weapons: "Recent Soviet developments in the generation of radio-frequency (RF) energy have potential applications for a fundamentally new type of weapon system that would degrade electronics or be used in an anti-personnel mode.

The Soviets already have or are working on much of the technology for such a system. In their research the Soviets have generated single pulses with peak power exceeding 1 billion watts and repetitive pulses of over 100 million watts.. No significant technological obstacles stand in the way of a prototype short-range tactical RF weapon."

This work was the basis of the concept of "planetary war" advocated by Marshal Ogarkov, according to which all available scientific knowledge concerning the biosphere is to be mobilized in war in order to crush the enemy. This includes development of means of weather modification, manipulation of the ionosphere and other layers of the atmosphere, large-scale biological warfare, triggering of natural disasters, as well as global electromagnetic warfare.

Vernadsky's efforts provided the scientific atmosphere for the launching of the most powerful current of Soviet biophysical research, that associated with Alexander Gurvich(1874-1954). Gurvich was the first to systematically demonstrate that absorption of minute amounts of "tuned" electromagnetic radiation, down to individual quanta, can decisively influence the course of biological events. This is now known in the Soviet literature as the "informational role of electromagnetic radiation in biological systems."

In connection with this research, Gurvich developed that first "field theory" approach to the geometry of living processes, and discovered the universal ultraviolet light emission of cells called "mitogenetic radiation". He was the first to point to the capability of biological molecules such as proteins and DNA, to absorb energy at long wavelengths and reemit the stored energy at much shorter wavelengths-phenomena which are intensively studied today under the name of "multiphoton processes in non-linear spectroscopy."

Gurvich was thereby a pioneer in the area of advanced research which is decisive for the most devastating forms of electromagnetic anti-personnel weapons.

Senator Dallas Harris

COMMITTEE MEMBERS ATTENDING VIA REMOTELY:

Assemblywoman Lisa Krasner
Assemblywoman Shondra Summers-Armstrong

COMMITTEE MEMBERS ABSENT:

Senator Keith F. Pickard (Excused)
Assemblywoman Elaine Marzola (Excused)

Amy Holem, Member of the Public:

[Ms. Holem read from ([Agenda Item II C-1](#)).]

Thank you, legislators, and Committee members, for inviting me here to speak to you about essential future legislation. Anyone can be targeted. It is time to update and implement new laws on technology, laws that reflect the current trends and the criminals that exploit them while flying under the radar. Confirmed reports of Havana Syndrome are on American soil by White House and federal employees and a recent report of an active-duty service member. Now these weapon systems are in the hands of criminals, Antifa members, domestic terrorist groups like Redfield, targeting at least 32 victims within Nevada and continuing in growth. These military-grade weapons are being used to torture these men, women, and children. They have burns and blisters, attacks on their central nervous system, are being sexually assaulted and raped on their private parts and organs. Victims are being hijacked into child/human sex trafficking rings, subjected to video voyeurism, and are being livestreamed of their suffering on the dark web and red rooms. I have counted over 72 federal and 108 state crimes that have been violated by these weapon systems and have over 10,000 audios verifying these attacks and criminal communications. Your Nevada constituents are impacted by these weapon systems with job and reputation loss, production decrease, homelessness, and family destruction. Military-grade weapon systems should only be in the hands of the U.S. military and not made available for trade or market. Anything that creates a wave, beam, signal, or pulse is causing invasion of privacy. Sexual assaults with the use of electronics can be used for torture, harm, or even murder of the victims.

Report on Neocortical Terrorism and the Use of Directed Energy Weaponry Against Humans and Other Biological Life Systems

By: Nicole Erica Aine

→ Given the fact that the human body and several other life systems are emitting electromagnetic radiation, several studies have looked at the various frequencies that are emitted. One such study was presented at a National Science Foundation event in 1973 called *Symposium and Workshop on the Effects of Low-frequency Magnetic and Electric Fields on Biological Communication Processes*. The study, done by J. Bigu Del Blanco and Cesar Romero-Sierra looked at an 8.95 GHz transmission emanating from both a human and a rabbit. The authors make note of an earlier hypothesis that DNA acts as an RF signal generator, RNA as amplifiers, the cell wall as a noise filter and enzymes and amino acids as effectors of signals. Building upon this hypothesis and viewing the double helix structure of DNA as a bifilar helical antenna you can correspond this frequency to chromosome 22 by taking the length of the strand multiplied by 2 and calculating the resonant frequency for an antenna of that length using the equation: antenna length in meters multiplied by wave velocity in meters per second which is the speed of light, 300 million. A 1976 patent by Robert Malech working for the defense contractor Mergellon and Darne titled *Method and Apparatus for the Remote Monitoring and Altering of Brain Waves* uses the principles of harmonic signal mixing and reflected power communications with DNA acting as an antenna and carrier of internal neural activity. The molecular mechanism which transduces electrical activity back and forth between DNA and the cellular cytoplasm of cells is done by the MORC microphidia (micro radio, God is real) nuclear ATPase protein gene family. It is through this protein that biological communications and the exploitations of it are made possible, which includes the ability to read and manipulate someone's thoughts at the conscious and subconscious level, sensory data including olfactory, gustatory, tactile, auditory and visual data and, motor data. ←

In 1776, the Bavarian Illuminati was formed by Adam Weishaupt with funding from Lord Mayer Rothschild of the Rothschild banking dynasty. Their objectives were to remove the idea of God from human society and overthrow all existing governments in order to establish a monolithic rule over the world. Weishaupt recruited the top scientists of the day to develop technology beyond the capability of the time. It is worth mentioning that the existence of the Illuminati was made public because in 1785 a courier for the Illuminati by the name of Lanzel was struck and killed by a bolt of lightning. This could be a coincidence but it is worth mentioning that lightning can be remotely initiated by directed electromagnetic waves in order to cause the voltage differential necessary for discharge into the atmosphere. The 1810 book *Illustrations of Madness: Exhibiting a Singular Case of Insanity, And a No Less Remarkable Difference in Medical Opinions: Developing the Nature of An Assaultment, And the Manner of Working Events; with a Description of Tortures Experienced by Bomb-Bursting, Lobster-Cracking and Lengthening the Brain. Embellished with a Curious Plate* written by John Haslam, details one of the earlier known cases of exploiting the biological communications system. The book details an account of James Tilly Matthews, a man who was incarcerated under draconian practices at Bethlam hospital in London for speaking out against the government and accusing Lord Liverpool of treason. In the book, written from the narrative of Haslam, Matthews accurately details the experiences that several thousands of people are aware of and tormented with daily. Matthews describes a situation that involves full thought transference between him and someone else. He describes a concoction which included seminal fluid from both male and females as well as another which included arsenic and copper as an aerosol. He also mentions that he was told during an earlier stay in a French prison that mind control required the use of a magneto, a type of generator which was supposedly invented almost 50 years later by Michael Faraday. Given the lack of computing technologies, the best explanation for this early use of neocortical terrorism is that the seminal fluid is used to introduce the same external genome into two people coupled with arsenic and copper which would cause DNA damage in neurons and necessitate DNA repair with the intact external genome mediated by RAD51 modulated by an external electric field in a way known as horizontal gene transfer. This would cause key neurons to have an equal resonant frequency in both individuals. ← Given that this was being done in the late eighteenth century it's impossible to not look at every major event since then without wondering if it was possibly influenced through this technique, at least until about the 1950's when radio technology allowed a hands-off method of telepathy.

The specifics as to the development of synthetic telepathy are obfuscated but during the 1950's both the United States and the Soviet Union were starting to work on its development, most of the available information comes from the Soviets because of a higher level of suppression here. It is known that John Von Neumann worked on secret projects for the government. Given his background as a computer scientist with an interest in viewing the human brain as a digital processing system and his posthumously published unfinished book, *The Computer and the Brain*, and evidence suggesting that he may have in fact been murdered it is very likely that he was working on deciphering the neural code. The CIA was experimenting with training people to tune into others neural transmissions at this time using ESP extrasensory perception cards developed by J.B. Rhine. One use of Rhine's methods was tested aboard the nuclear submarine USS Nautilus in the Arctic circle underneath the ice shelf from Duke University in North Carolina. The experiment was successful which indicated that the human brain is generating scalar waves, a condition that requires two homologous transverse radio frequency signals with one being transmitted 180° out of phase to cause destructive interference and transfer the photonic energy into a longitudinal waveform capable of penetrating through the earth's core and traveling millions of miles. In 1958, Gillis Patrick Flanagan invented the neurophone and patented it under the name *Nervous System Excitation Device*. It had the capabilities of inducing audible sounds including speech directly into the mammalian brain. What made this device unique from others is that it uses modulated microwave carrier waves to directly interact with neurons as opposed to other methods for achieving this such as broadcasting mechanical pressure waves just above the human hearing range of about 18 KHz such as used in a method known as silent sound spread spectrum. Dr. Flanagan would later become a consultant for the CIA, NSA and, Office of Naval Research.

This is to allow the most complete possible sampling of brain waves and imprints of each type of human being, also taking into account their DNA. Brain imprints and DNA resonance frequencies are in fact classified biometric markers that are used to locate and target an individual wherever they are in the world (without even wearing anything on them). The experiments also serve to decode the electrical language of the brain (which has already been accomplished).

The 1950s Secret Discovery
of the Code of the Brain:

U.S. and Soviet Scientists
Have Developed the Key to Consciousness
for Military Purposes.

How The U.S. Government
Won the Arms Race to Control Man

A documentary with quotes by leading scientists, professionals and several independent sources

By Cheryl Welsh, copyright
May 1998

The development of mind control technology has been and is the goal of many governments and is a reality today. Here is a summary of the main points and their application to mind control experimentation. With all of the facts taken together, it can be concluded that the brain was decoded and the information was applied to intelligence tools and military technology in the 1940s to about 1965. Victims began reporting experimentation in the 1960s. The level of brain research matches this timetable. The discovery of the secret of life was linked to DNA in the 1950s and the genetic code was broken in the 1960s. As a result there is a massive gene mapping federal and worldwide program to apply the knowledge of DNA. Similarly, the teams and groups of the world class scientists, engineers, physicists, etc. were assembled in major universities, think tanks and government labs by the military to solve military problems in the 1940s, 50s and 60s.

Secret Surveillance and Electromagnetic Torture by the Secret Services

Translation by Cyborg Nicholson on Peacepink

LINK TO ORIGINAL ARTICLE FROM THE GERMAN PRESS: ←

<http://media.de.indymedia.org/media/2010/04/278517.pdf>

Interview with Carl Clark, Norfolk, England.

Armin Gross: Matters related to the secret services are usually not disclosed. You want to bring them out in the open though. Who did you work for?

→ **Carl Clark:** I worked freelance from 1980 to 2003 for various secret services. I worked for the American Central Intelligence Agency (CIA) up to 1997. I then worked for the Israeli Secret Services, Mossad and for the Anti-Defamation League (ADL), a US organisation against discrimination and defamation of Jews. I was also employed by MI 5, a subgroup of the British Secret Services. I later moved to the Police Secret Services as well as to the secret services of an investigation laboratory. I was deployed in European operations in Paris, Zurich, Berlin, Dusseldorf, Munich, Madrid, Lyon, Bilbao and Moscow.

Armin Gross: What were your main assignments?

Carl Clark: An important assignment was to infiltrate certain groups to obtain inside information about them. I would join certain groups, make friends with some of the members and then proceed to ruin their lives.

People can be tracked anywhere by radar, satellite, a base station and complimentary computer programs. For example, three radar devices would sometimes be positioned in the vicinity of the target. The radar emits electromagnetic waves, some of which pick up the target and the result is then evaluated. My friends who work in the special department could then follow the target all day on their computers. This form of localising the target made it easy to deploy the weapons accurately. My colleagues could see exactly where to aim and also observe how the target reacted.

OPTING OUT

Armin Gross: Why did you opt out?

Carl Clark: I saw that what I was doing was wrong. The last two targets that were allocated to me had done nothing. They were not political, quite normal, nice people, not criminal or economically dangerous. The only reason I could come up with for them having been selected as targets was their DNA or their blood. There has recently been a lot of research done in this area. The DNA is associated with the finest details of our character. The Human Genomes Project between 1993 and 2004 analyzed all chemical base pairs which make up human DNA, also collecting the genetic data of people from isolated communities in danger of extinction (Human Genomes Diversity Project). The results were then all compared and correlated. Our employers were always very keen on DNA analyses of the people under surveillance. It was always one of our most important tasks in the initial period of surveillance to organize DNA or blood analyses of these individuals.

*Matrix III**The Psycho-Social, Chemical, Biological
and Electromagnetic Manipulation
of Human Consciousness
Volume One*

By
Valdamar Valerian

First Edition Printing
May 1992

Holography also explains how the brain can store so many memories in so little space. Mathematician John Von Neumann, who has achieved some notoriety because of his alledged involvement with the Philadelphia Experiment (Project Rainbow) and the subsequent Phoenix Projects, calculated that over the course of a human lifetime, the brain stores 2.8×10^{20} bits of information (2,800,000,000,000,000,000 bits), as mentioned.

*Funding for Military Research
into DNA Absorption of Microwaves*

→In 1986, the U.S. Air Force funded a project costing over \$120,000 at King's College, London. The project was run by Professor Edward Grant, and had to do with the effects of microwaves on human DNA. Much of the US work on DNA absorption is being funded by the U.S. Navy, while British and Swedish research contracts on the subject are paid by the U.S. Air Force.

Brain scan 'sees hidden thoughts'

Scientists say they can read a person's unconscious thoughts using a simple brain scan.

MailOnline Science

HOW IT WORKS

- 1 Volunteers were wired up to an MRI brain scanner while watching video images to analyse brain activity
- 2 Impulses from brain's visual cortex were fed into a computer, to interpret colours, shapes and movements on screen
- 3 Volunteer watches a different film and computer produces images based purely on their brainwaves

What the volunteer sees on screen

Image converted from brainwaves

mind reading machine.jpg

Using a functional magnetic resonance imaging (fMRI) scanner, normally found in hospitals, the American team scanned the brains of two volunteers while they watched videos.

The results were fed into a computer which looked for links between colours, shapes and movements on the screen, and patterns of activity in the brain.

Brussels' subsidy to shift away from infrastructure

[intro] European Commission proposals aimed at encouraging poor countries and regions to spend more of their European Union (EU) subsidies on research, but placing less emphasis on building new facilities, will be considered after 2009 — will be presented to the European Parliament and Council of Ministers for discussion.

The subsidies, known as 'structural funds', will continue after 2006 with the aim of promoting competitive development in poor regions (see *Nature* 388, 192-193, 1997). But regions and countries eligible for the funds will be encouraged to spend a higher proportion on research than they do now. They will also be encouraged to spend more of the funds allocated for research on training, innovation, technology transfer and dissemination of results.

The building of infrastructure facilities has previously been generously funded. Structural fund spending on research has increased to 3.2 per cent of the total from 2.9 per cent in the early 1990s, but the technology gap between poor and rich countries and regions has closed only slightly.

The new round of structural funds, covering the period 2006-2006, will total EUR225 billion (US\$287 billion), including EUR45 billion earmarked for new EU members. The proportion dedicated to research is likely to be compatible with the budget of the commission's 6th Framework programme for research, which will be about EUR16 billion (see below) and the new philosophy an structural funds complements that on the 6th Framework programme, which stresses emphasis on the dissemination and exploitation of results.

Brain scanner could extract images to be given such as PET scanning pose a risk to privacy?

Advances in neuroscience 'may threaten human rights'

[intro] Neuroscience is being increasingly recognized as posing a potential threat to human rights, not in another area of thought — **rather in brain genetics** — may lead to an excessive focus on genetic determinism and limit the scope of genetic discrimination. This was one of the conclusions to emerge from the annual public meeting of the French national bioethics committee, held last week in Paris on the theme of 'Science and Freedom'.

Jean Pierre Changon, the chairman of the committee and a neuroscientist at the Institut Pasteur in Paris, told the meeting that understanding the working of the human brain is likely to become one of the most ambitious and multidisciplinary of the future. The neuroscientist also poses potential risks, he said, arguing that advances in cerebral imaging could be used for invasion of privacy purposes. Although the regulator ANM is still highly sceptical, it will become more complex and capable of being used in a distinct, he predicted. That will open the way for advances in invasion of personal liberty, control of behaviour and

bioengineering. These are far from being science-fiction concerns, said Changon, and constitute 'a serious risk to society'.

Dominic Ballez, a researcher at the French Atomic Energy Commission, told the meeting that the use of imaging techniques has reached the stage where 'we can almost read people's thoughts'.

The national bioethics committee is taking such threats seriously that it is launching a study to consider the issues and recommend possible precautions. The study will also cover cross-media issues such as the legal question of whether criminals are responsible for their actions. Changon predicts an increase in defence arguments based on irresponsibility due to a genetic predisposition to certain types of behaviour.

In closing the meeting, Gerald Allaire, the minister for national education, research and technology hinted at the creation of a central parliamentary office of technology assessment, arguing that the national bioethics committee's approach to the life sciences should be applied to other areas of science.

Framework themes grow to four, but budget stays the same

[intro] The European Commission has increased the number of themes in its next five-year Framework programme for research from three to four, but is retaining the original budget figures.

The addition of a theme to the programme, which is due to start next year, is a response to proposals from the European Parliament (see *Nature* 391, 3, 1996).

The parliament had also proposed a small increase in the budget of the 6th Framework programme (FP6). But the final proposal, released in Brussels last week and to be presented shortly in member states as

represented by the Council of Ministers, sticks to the original budget of EUR16.3 billion (US\$17.6 billion).

In addition, the parliament had suggested making terminology more straightforward, but the commission rejected this and will keep its less-precise naming tradition.

Thus the names suggested for the four thematic programmes are: 'improving the quality of life and the management of living resources'; 'creating a user-friendly information society'; 'promoting competitive and sustainable growth'; and 'preserving the ecosystem'. The commission

does not want to separate energy and environment in the last named programme, although the parliament had asked that each of these have its own budget line.

The commission also added ten more targeted programmes within programme — 'very actions' — to a list it had hoped to limit to 10. The additions are 'bringing populations' and 'global environmental change and climate'.

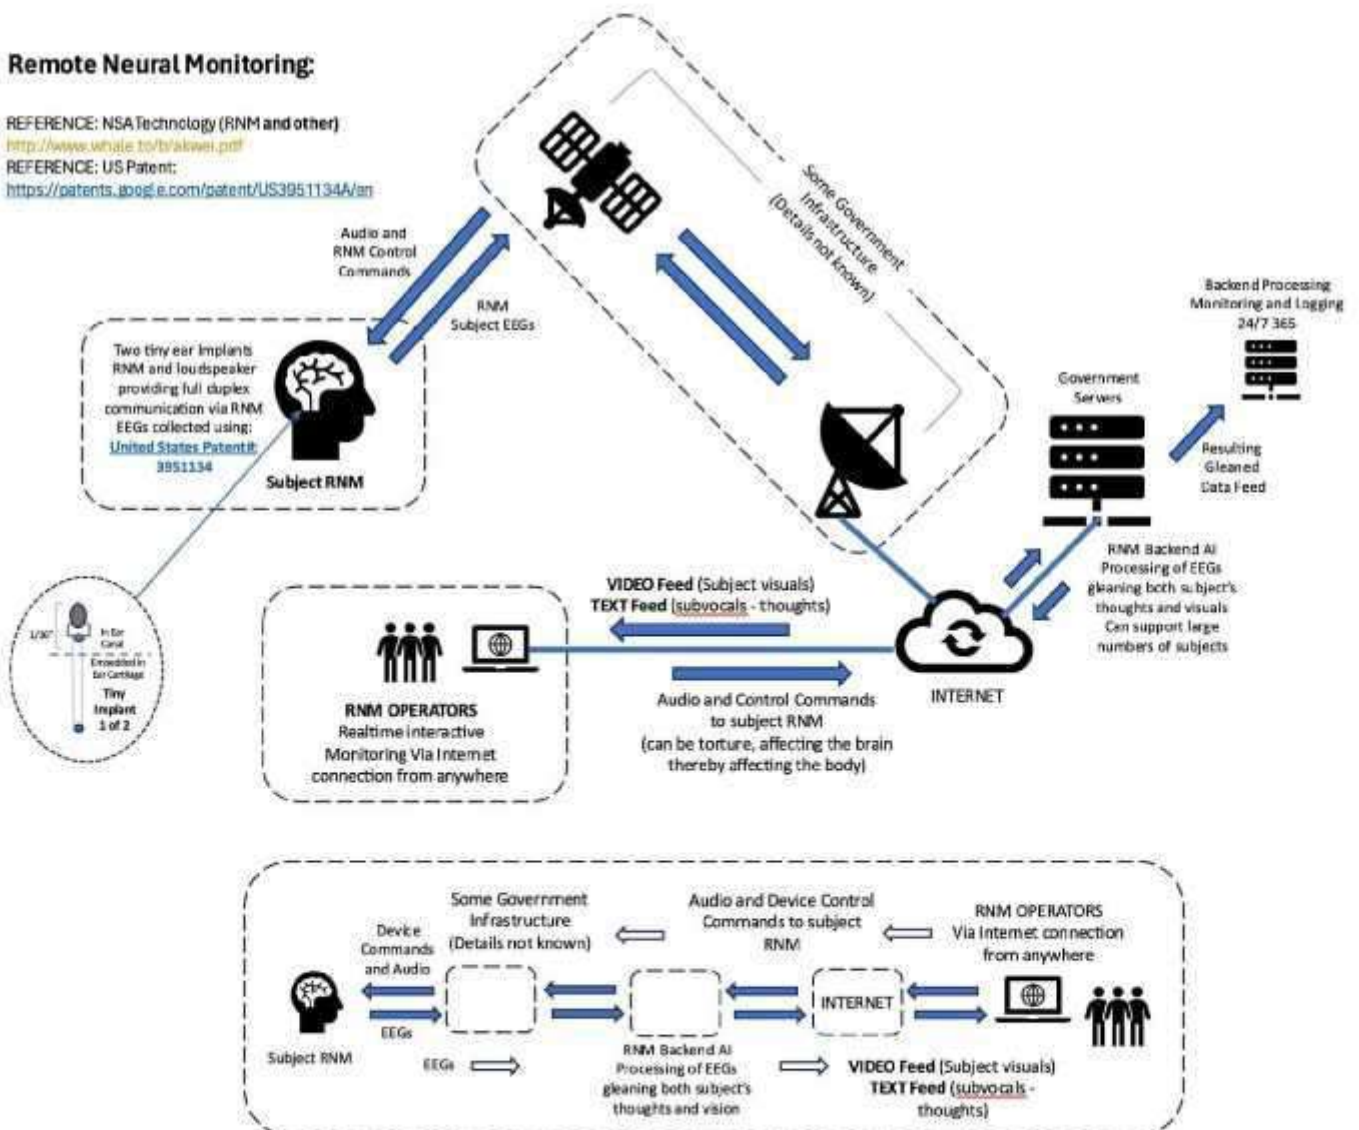

The commission's revised proposals are due to be discussed by the research ministers of the 15 member states, meeting at the Council of Europe, in mid-February.

Directed Energy Weapon / Targeted Individual Patents

Patent No.	Freq	Wave type	Symptom	Filing Date	Publication / Invented By	Original Assignee	Description
US 6021294 A	1.2Hz and 2.4Hz		Nik	31 Aug 98	18 Jul 00	Hendrius G. J. Loos, Hendrius G.	Pulsative Manipulation of Central Nervous Systems
US 6488617 B1	1.8Hz	M	Nik	13-Oct-00	3-Dec-02	Bruce F. Katz	Universal Hedonic Method and Device for Producing a Desired Brain State via magnetic waves
US 7629518 B2	"RFDE" and radar		location a	15-Dec-03	8-Dec-09	Kenneth W. B Raytheon Company	Weapon with integrated targeting system to locate targets. Damages/disrupts electronics, biological entities, and physical structures.
US 6470214 B1	3.500 Hz (probably)		V2k	13-Dec-96	22-Oct-02	James P. O'Lo	United States Air Force Remotely transmits intelligible subjective sound into target consciousness. ("Voice to Skull")
US 1393275			V2k	13-Mar-62	16-Jul-68	G.P. Flanagan	Listening Incorporates allows information to be remotely conveyed to subject via electromagnetic waves.
US 3951134	100, 130, 230 MHz		Nik	5-Aug-74	20-Apr-79	Robert G. Mai, Donno & Marabini	Apparatus and method for remotely monitoring and altering a target's brain waves / central nervous system.
US 4199400			Nik	26-Nov-80	26-Jul-85	Rene A. Lundy & David L. Tyler	subliminal manipulation of subjective emotions via remotely directed audio waves
US 4834701	4.18 Hz		Nik	24-Jul-83	30-May-88	Kazumi Masai Ken Hayashibara	Remote neurological control via sets of low frequency waves beamed at brain
US 4858612 A	microwave spectrum		V2k	29-Dec-82	22-Aug-89	Philip L. Stock, Stocklin Philip L.	Transmits sound to auditory cortex of mammals via remotely applied microwave signals.
US 4877027 A	100-30,000 MHz		V2k	6-Jun-88	23-Oct-89	Wayne B. Bitt, Brunton Wayne B.	Transmits sound to auditory cortex of mammals via bursts of remotely applied microwaves.
US 5128899 A	40-80 Hz, two signals	E	Nik	17-Jan-91	23-Jun-92	James Gall	James Gall Alters mood, emotion, sleep states via remotely applied frequencies and wave forms
US 5138703 A	14.3 kHz	E	V2k	28-Dec-89	27-Oct-92	Olivier M. Low, Olivier M. Lowery	Presents subliminal auditory information to the human via remotely applied waves
US 5336368 A	4.212 Hz		Nik	1-Mar-91	18-Oct-94	Robert A. Mio, Interstate Inductiv	Method of and apparatus for inducing desired states of consciousness
US 6587728 B2			V2k	24-Apr-02	1-Jul-03	James P. O'Lo US Air Force	Apparatus for audibly communicating speech using the ultra frequency hearing effect
US 6052336 A			V2k	1-May-98	18-Apr-00	Austin Lowery, Lowery, III, Austin	Apparatus and method of broadcasting audible sound using ultrasonic sound as a carrier
US 6011991 A		IR, RF or satellite	RJ, Nik	7-Dec-98	4-Jan-00	Arts Medios Technology Patent	Remotely identifies individuals by brainwave signature; monitors words, phrases, and thoughts by brain activity
US 5889870 A			Voice	17-Jul-96	30-Mar-99	Elwood G. No, American Technolo	Makes voices emanate from individuals who do not intend or realize it. "Ventriloquist Effect".
US 5507291 A	300-1,000 Hz		RJ	5-Apr-94	16-Apr-96	Robert C. Stiri, Stiri, Robert C., W	Method for remotely determining information relating to a person's emotional state.
US 3393275 A			V2k	13-Mar-62	16-Jul-68	Patrick Flanagan	Listening Inc Remotely cause individual to hear voices via EMF waves - Imperceptible to anyone else.
US 3647570 A	50 kHz	E	V2k	29-Aug-66	7-Mar-72	Gillis P Flanagan, Gillis P Flanagan	Remotely cause individual to hear voices via EMF waves - Imperceptible to anyone else.
US 8579793 B1	0 Hz - 5 kHz		Nik	27-Jan-11	12-Nov-13	James David Honeycutt, John Clay Honeycutt, James David Honeycutt, John Clay Honeycutt, Jr	Controls brain state by placing engineered EMF patterns into the AC wiring of a building.
US 2014030948 A1			Nik	24-Jan-14	16-Oct-14	Daniel Wozniak, Daniel Wozniak Ch	Induce desired brain state in person by adding waves into a music file
US 6488617 B2		M	Nik	13-Oct-00	3-Dec-02	Bruce F. Katz	Universal Hedonic Monitor and control the brain state of an individual via pulsed magnetic fields aimed at brain
US 8506144 B2	1/2 - 2.4 Hz	E	Nik	1-Jun-01	34-Jan-03	Hendrius G. J. Hendrius G. Loos, Carol A. Tosey, John W. Shea, Jr	Manipulation subject brain waves via frequencies emanating from computer and TV screens
US 8467133 B1		M	Voice	6-Jul-99	26-Nov-02	W. Shea, Jr, John W. Shea, Jr	Makes voices emanate from individuals who do not intend or realize it. "Ventriloquist Effect". Also functions for voice-recognition.
US 6426913 B1			Voice	4-Jan-01	30-Jul-02	William A. Ge, William A. Geozzo	Portable, hand-held device for producing humanly audible sounds and voices.

G. Patrick Flanagan of Ballaire Texas was a boy genius. In addition to being an outstanding gymnast and a pilot, this high school graduate had stumbled upon a technique of introducing audio information directly into the human nervous system without loudspeakers or earphones, and without direct electrical connection between his gadget and the nervous system.

On July 24, 1962 in Bellaire, Texas in Flanagan's shop in the attic of his parents home, I personally witnessed proof-of-principle demonstration of a direct linkage between a crystalline electronic circuit and the colloidal system of the human nervous system.

As a result of the knowledge gained in this area, I designed a circuit which suppressed the frequency domain, while amplifying the time domain. This device, was so radical in approach, that I applied for a patent on it as a specialized speech processor. Six months after the patent was applied for, the National Security Agency placed the patent application under a top secrecy order #756,124. The order said that my invention was being suppressed in the interest of National Security. It further stated that I could be tried for treason and shot by firing squad if I revealed its working nature to anyone other than an authorized government representative. In other words they stole it! Needless to say I was very disappointed in the system. It took four year, and three law firms to sue for release of my invention. We won the battle, and the secrecy order was rescinded. Patent #3,647,970 was issued on the 7th of March 1972.

OSTI.GOV / Patent: *Ultrasonic speech translator and communications system*

Ultrasonic speech translator and communications system

PATENT • 23 July 1996

OSTI ID: 264570

Akerman, M A; Ayers, C W; Haynes, H D

A wireless communication system undetectable by radio frequency methods for converting audio signals, including human voice, to electronic signals in the ultrasonic frequency range, transmitting the ultrasonic signal by way of acoustical pressure waves across a carrier medium, including gases, liquids, or solids, and reconverting the ultrasonic acoustical pressure waves back to the original audio signal. The ultrasonic speech translator and communication system includes an ultrasonic transmitting device and an ultrasonic receiving device. The ultrasonic transmitting device accepts as input an audio signal such as human voice input from a microphone or tape deck. The ultrasonic transmitting device frequency modulates an ultrasonic carrier signal with the audio signal producing a frequency modulated ultrasonic carrier signal, which is transmitted via acoustical pressure waves across a carrier medium such as gases, liquids or solids. The ultrasonic receiving device converts the frequency modulated ultrasonic acoustical pressure waves to a frequency modulated electronic signal, demodulates the audio signal from the ultrasonic carrier signal, and conditions the demodulated audio signal to reproduce the original audio signal at its output. 7 figs.

EXPERIMENT PROVIDES CAT'S-EYE VIEW OF WORLD

By Bill Hoffmann

Published Oct. 11, 1999, 4:00 a.m. ET

IFLSCIENCE SEARCH

Professor Kerimov explains that he had heard scientists in Kyiv were working on a project that managed to "tap" the brain activity of a skilled musician as they played the piano. This brain activity, somehow, could then be recorded and played back into the forearm of a non-musician, allowing them to play the piano with perfect mastery. The Soviet scientist, funnily enough, refused to go into detail about this research and the CIA agent notes that some of these stories are "fairly dubious".

Another project saw researchers develop a "simulated frog's eye" for the purpose of airport surveillance, while a further avenue of research explored the possibility of direct communication between humans and computers via telepathy.

Recognisable objects

The scientists recorded the patterns of firing from the cells in a computer. They then used a technique they describe as a "linear decoding technique" to reconstruct an image.

To their amazement they say they saw natural scenes with recognisable objects such as people's faces. They had literally seen the world through cat's eyes.

Other scientists have hailed this as an important step in our understanding of how signals are represented and processed in the brain.

Scientists saw recognisable objects

It is research that has enormous implications

Artificial brain extensions

It could prove a breakthrough in the hoped-for ability to wire artificial limbs directly into the brain. More amazingly, it could lead to artificial brain extensions.

By understanding how information can be presented to the brain, some day, scientists may be able to build devices that interface directly with the brain, providing access to extra data storage or processing power or the ability to control devices just by thinking about them.

One of the scientists behind this current breakthrough, Garrett Stanley, now working at Harvard University, has already predicted machines with brain interfaces.
